

Profili project

PROFILI project had the objective to create an information system to support cooperation and dialogue in Public and Private Partnership between institutions and SMEs in the sector of building construction. Project promoted the matching between private needs, citizen demand and municipalities duties with PPP tool.

PROFILI collected developing plans and territorial data in 40 municipalities and informations about production processes, skills and know-how in over 400 companies, in order to facilitate technology transfer processes, integration and knowledge sharing and increase the ability of finding financial resources. PROFILI collected 10 case studies and 30 best practice in PPP planification and management.

The exchange of expertise and collaboration between all the actors operating in cross border area and involved in PPP projects can increase the competitiveness of private companies; intensify the economic relations and expand the market as well as it can improve public utility services.

The development and results of the project are shown on the website: <http://www.profil-ita-slo.eu/>.
